

Koa Shen

Mechanical Engineering | Hardware Design, Mechatronics & Validation | Summer 2027

(415) 810-8344 koashensf@gmail.com koashen.com linkedin.com/in/koa-shen github.com/koa-shen

EDUCATION

University of California, Santa Barbara

Expected June 2028

B.S. Mechanical Engineering | Major GPA: 3.97 | Cumulative GPA: 3.94

- Dean's Honors every quarter. Coursework: Dynamics, Mechanics of Materials, Circuits, MATLAB.
- Current coursework: Dynamical Systems and Machine Learning.

ENGINEERING EXPERIENCE

Mechanical Engineering Intern

Summer 2026 - Present

SLAC National Accelerator Laboratory, LCLS | Menlo Park, CA; extended part-time remote

- Built a Python/Drake digital twin for a 30-DOF, 305-body beamline assembly; millisecond collision checks exposed at least five physical pinch points and informed hardware redesigns.
- Developed 15 reusable motion-stage models; framework is being adopted across three LCLS assemblies using OpenCascade CAD import, CoACD collision geometry, and MeshCat visualization.
- Redesigned optics packaging with kinematic mounts, alignment lasers, and detector strain relief; checked stage and mount load cases to address crash and drop risks for \$100k+ detectors.
- Produced Siemens Solid Edge designs and PDM-controlled documentation with GD&T for manufacture and inspection; path planning and EPICS controls integration remain in development.

Fabrication Team Lead

Fall 2024 - Present

Gaucha Racing, Formula SAE Electric | UC Santa Barbara

- Led a 15-person team through driver safety-system design, manufacturing, and installation; GR26 passed FSAE technical inspection fully rules-compliant.
- CNC-machined 33 suspension parts from 4130 steel and 7075-T6 aluminum on Haas mills and lathes, holding critical bearing fits within 0.0005 in.
- Own chassis and ergonomics packaging, coordinating welded tube structures, assembly design, and interfaces with vehicle subteams.

Maintenance Technician

Summer 2025

Exploratorium | San Francisco, CA

- Serviced 100+ public exhibits and completed three major overhauls through reverse engineering, machining, and welding; an enclosure redesign avoided \$3,000+ in replacement-part costs.
- Redesigned encoder mounts and load-spreading hardware for reliability and serviceability; left CAD, CAM files, and remanufacturing instructions in Confluence for future technicians.

SELECTED HARDWARE PROJECTS

Closed-Loop Cycloidal Actuator

Summer 2026 - Present

- Designed and fabricated a 15:1 cycloidal reducer within a NEMA 17 motor's 42 mm square footprint, selecting PETG/ABS print orientations for load capacity and dimensional accuracy.
- Built PlatformIO C++ firmware for a TMC2209 driver and 12-bit AS5600 motor-shaft encoder; bench-validated closed-loop position correction and missed-step detection on a single joint.

Formula SAE Steering-Wheel Development

2024 - 2026

- Helped reduce assembly mass from 5 lb to 1.7 lb through iterative design and FEA-guided optimization; integrated buttons, potentiometers, a display, and a quick-release mechanism.

TECHNICAL SKILLS

Design & Analysis: SolidWorks, Solid Edge, Teamcenter PDM, GD&T, FEA, statics/dynamics, kinematics

Fabrication: Mastercam, CNC/manual machining, welding, 3D printing, assembly, design for manufacturing

Software & Controls: Python, C/C++, MATLAB, Git, Drake, PlatformIO, Arduino, encoders, stepper control
